

When you open up the release planning tool, you will see **three (3) sprints** that are ready to be filled.

You will also see a backlog of requirements to add to the sprints. You are able to drag and drop these requirements into the sprints.

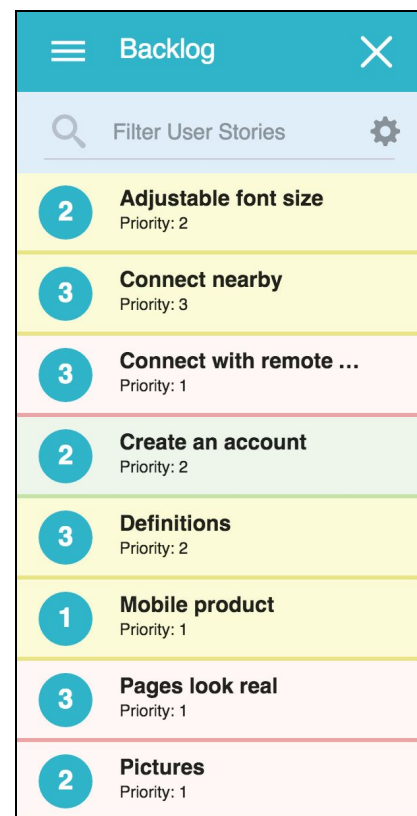

Each of these requirements has a “short name” of the user story name.

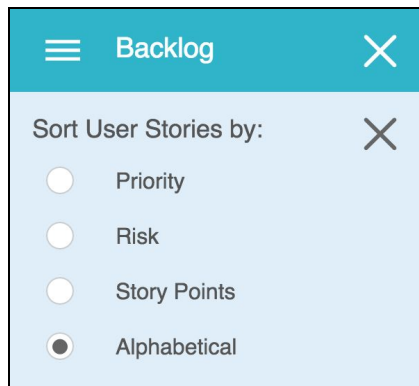

The color of the requirement refers to the **risk** that is associated with that requirement. Green is a Low Risk user story, yellow is a Moderate Risk user story, and red is a High Risk user story.

The number inside the circle on the left-hand side is the number of **story points** that are associated with that user story.

The **priority** of the user story is listed underneath the short name.

You can use the search bar to find a particular user story.

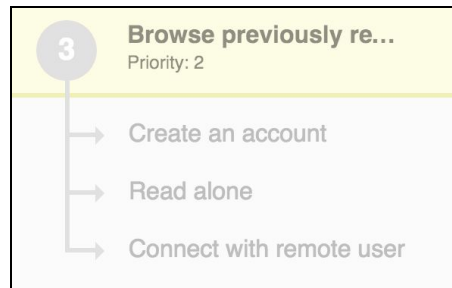

You are able to sort the user stories by pressing the gear icon in the top right corner. You can sort the user stories based on number of story points, priority, risk, or alphabetically by name.

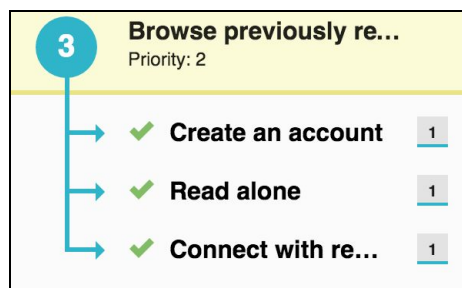

Once you select one of these sorting features, the list will display the list of user stories accordingly. The list will display the available user stories sorted in the selected order, followed the unavailable user stories also displayed in the selected order.

You are also able to see the user stories that are dependent on a particular user story.

If the dependent user stories have not been placed in a sprint, then you cannot place that user story into a sprint:

If all the dependent user stories have been placed into a sprint, then they will be checked off and you will be able to place that user story.

Adjustable font size

As a reader, I want to be able to adjust font size, so that it is easier to read.

Dependencies

No dependencies

If you want more information about a user story, you can click on the user story, and this pop-up will appear.

Here, you can see the user story name, the story points, the priority, the risk, and any dependent user stories.

Once you feel that your release plan is complete, press the **Download PDF button**.
