Retrospective Meeting Minutes

Sprint 2

What Went Well:
- Completed all the expected user stories.
    - However, team was close to not completing them all.
- Team had all their tests written early.
    - Improvement from last sprint.
- Communication improved this sprint.
    - Standups were productive.
    - Everyone knew the status of the product at all times.

What We Could've Done Better:
- Looked at dependencies of user stories earlier.
    - Database connection should probably have been in the last sprint since so many things were dependent on it.
    - If something had gone wrong with that feature, the whole sprint would've been a failure.
    - Shouldn't face that issue in the next sprint (based on the user stories scheduled).
- Story points weren't accurate.
    - Was determined before sprint, so not detrimental.
    - Need to make sure team continues to do that.

What We Can Improve On:
- More pair programming.
    - Didn't do it very often this sprint.
    - Team is going to try self-assigning tasks in pairs next sprint to encourage more pair programming.
- Continue to improve communication.
